

Meet the Webcast Hosts

Mike the “Webcast Guru” Novotney

- 5+ years of experience with watershed planning and assessment, technical writing and analysis, stormwater and watershed management program development and stormwater design
- MS in Civil and Environmental Engineering, BS in Civil Engineering
- Professional Engineer registered in the state of MD
- Famous Mike quotes
“No, I’m not related to Vladimir.”
“I bathe in stormwater for a living.”

Dave the “Webcast Master” Hirschman

- 25+ years of watershed and stormwater experience in the local government, consulting and nonprofit setting with expertise in watershed and stormwater management.
- Expertise in watershed and stormwater management
- MS in Urban and Regional Planning, BA in Biology
- Certified Toastmaster
- Famous Dave quotes
“Oh yeah, well I drink a gallon of stormwater everyday.”

Plus Other Staff and Invited Guest Speakers

The Center staff consists of a multi-disciplinary team of experienced engineers, biologists, planners, and practitioners. The staff has extensive experience working directly with scores of governmental agencies, watershed organizations, and consultants to provide effective engineering, regulatory, and programmatic solutions to practitioners in geographically diverse settings. Many of the staff will participate in the delivery of the materials for the webcasts along with local, regional, and national experts in the field.

Watershed & Stormwater Management

—WEBCAST SERIES—

Center for Watershed Protection is proud to present our webcast series on watershed and stormwater management. The advantages of the Center’s Webcasts include:

- Your entire staff can train along with you for no additional cost! When you enroll, you’re entitled to unlimited participants per connection.
- Webcasts packed with information and resources for watershed practitioners and policy makers.
- Our presenters have a proven track record of delivering subject materials and have consistently received high ratings by past attendees.
- Earn Continuing Education Units.

Current Line Up of Webcasts (Based on Eastern Time)

W-1 Thursday May 14, 2009 from 12-2

\$99

Municipal Pollution Prevention/Good Housekeeping

Does your municipality suffer from unruly roadways, horrendous hotspots, and lackluster landscapes? Are you wondering how to manage your municipal operations to protect water quality? This webcast is for you.

W-2 Wednesday June 17, 2009 from 12-2

FREE

Managing Stormwater in the Age of Budget Cuts

Need practical tips on prioritizing program elements that achieve multiple objectives, phasing implementation, and looking at multiple sources of revenue? Experts on stormwater program funding will be on hand to answer your questions.

W-3 Wednesday October 14, 2009 from 12-2

\$99

Stormwater Retrofitting

Our most requested topic, this webcast will focus on the restoration of urban and suburban watersheds through stormwater retrofitting. The webcast will feature CWP's Urban Stormwater Retrofit Practices manual that discusses retrofitting existing urban lands, such as parking lots, residential streets, conveyance systems and landscaped areas. The webcast will also provide information about the cost and pollutant removal performance of stormwater retrofits.

W-4 Wednesday November 18, 2009 from 12-2

\$99

Urban Watershed Forestry

"Who will speak for the trees?" wonders the Lorax. This webcast will bring the Lorax into the discussion of watershed management by covering a wide range of urban watershed forestry topics. The webcast will address developing tree canopy goals, assessing and increasing forest cover in a watershed, conserving and planting trees at development sites, using trees as part of stormwater treatment, and more! The webcast will introduce participants to the Center's Urban Watershed Forestry Manual series and website.

W-5 Tuesday December 15, 2009 from 12-2

\$99

Erosion/ Sediment Control

An introduction to the elements of effective local erosion and sediment control programs, this webcast will provide information on addressing NPDES MS4 construction site runoff control requirements, developing meaningful erosion and sediment control plans, reviewing the effectiveness of site-level erosion and sediment control practices, and developing an effective plan review, inspection, and enforcement process. The webcast will also address training and certification and using third-party inspectors to ease the burden on local program resources.
